Batch 28 — Final Developer Run-to-Green Manual

Meat Lovers CIMS powered by YohPal

28A.

`docs/FINAL_DEVELOPER_RUN_TO_GREEN_MANUAL.md`

```
# Meat Lovers CIMS powered by YohPal
## Final Developer Run-to-Green Manual
```

This manual is binding.

Developers must follow this order exactly. No guessing. No folder changes. No silent architecture changes.

1. Final Root Structure

```
```text
meat-lovers-cims/
├── apps/
│ ├── website/
│ ├── admin-web/
│ ├── pos-pwa/
│ └── monitoring-web/
├── backend/
├── database/
│ ├── migrations/
│ ├── seeds/
│ └── backups/
├── deployment/
│ ├── nginx/
│ ├── apache/
│ ├── scripts/
│ └── windows/
├── docs/
├── .env
└── README.md
```

---

## 2. Execution Order

### Step 1 — Prepare Local Server

Install:

```
sudo apt update
sudo apt install nginx mysql-server php php-fpm php-mysql php-cli unzip curl git nodejs npm -y
```

Copy project:

```
sudo mkdir -p /var/www/meat-lovers-cims
sudo cp -r meat-lovers-cims/* /var/www/meat-lovers-cims/
cd /var/www/meat-lovers-cims
```

---

### Step 2 — Configure Environment

```
cp .env.example .env
```

Set:

```
DB_DATABASE=meat_lovers_cims
DB_USERNAME=meat_lovers_user
DB_PASSWORD=StrongLocalPassword
JWT_SECRET=CHANGE_THIS_LOCAL_SECRET
APP_URL=http://SERVER_LAN_IP
```

Each frontend app must have:

```
VITE_API_BASE_URL=http://SERVER_LAN_IP/api
VITE_APP_NAME="Meat Lovers CIMS powered by YohPal"
```

Required files:

```
apps/website/.env
apps/admin-web/.env
apps/pos-pwa/.env
apps/monitoring-web/.env
```

---

## 3. Database Setup

```
sudo mysql
```

```
CREATE DATABASE meat_lovers_cims;
CREATE USER 'meat_lovers_user'@'localhost' IDENTIFIED BY 'StrongLocalPassword';
GRANT ALL PRIVILEGES ON meat_lovers_cims.* TO 'meat_lovers_user'@'localhost';
FLUSH PRIVILEGES;
EXIT;
```

Run all migrations in strict order:

```
for file in database/migrations/*.sql; do
 mysql -u meat_lovers_user -p meat_lovers_cims < "$file"
done
```

Run all seeds in strict order:

```
for file in database/seeds/*.sql; do
 mysql -u meat_lovers_user -p meat_lovers_cims < "$file"
done
```

No migration may be skipped.

---

## 4. Backend Run-to-Green

Start backend test server:

```
cd backend
php -S 0.0.0.0:8000 -t public
```

Test:

```
curl http://localhost:8000/api/monitoring/live-control
curl http://localhost:8000/api/enforcement/dashboard
curl http://localhost:8000/api/products
curl http://localhost:8000/api/hrm/compliance-dashboard
```

Backend is not green until:

```
[] API starts without fatal error
[] Database connects
[] Login works
[] Products load
[] Orders can be created
[] Payments can be settled
[] Stock updates work
[] Reports load
[] Enforcement dashboard loads
```

---

## 5. Frontend Build Order

Build website first:

```
cd apps/website
npm install
npm run build
```

Build admin:

```
cd ../admin-web
npm install
npm run build
```

Build POS:

```
cd ../pos-pwa
npm install
npm run build
```

Build monitoring:

```
cd ../monitoring-web
npm install
npm run build
```

Frontend is not green until all four apps build successfully.

---

## 6. Required User Access Points

Website: [http://SERVER\\_LAN\\_IP](http://SERVER_LAN_IP)  
Admin: [http://SERVER\\_LAN\\_IP/admin](http://SERVER_LAN_IP/admin)  
POS: [http://SERVER\\_LAN\\_IP/pos](http://SERVER_LAN_IP/pos)  
Monitoring: [http://SERVER\\_LAN\\_IP/monitoring](http://SERVER_LAN_IP/monitoring)  
API: [http://SERVER\\_LAN\\_IP/api](http://SERVER_LAN_IP/api)

---

## 7. Admin Modules to Verify

```
[] Dashboard
[] Website leads
[] Suppliers
[] Products
[] Stock
[] Bar
[] Kitchen
[] Dispatch
[] Unsold food
[] Assets
[] HRM
[] Finance
[] Income statement
[] Approvals
[] Storekeeping
[] Production
[] Pricing
[] CRM
[] Staff motivation
[] Enforcement
```

---

## 8. POS Flow Verification

Developer must test:

```
[] Waiter login
[] Select table
[] Add food item
[] Add soft drink
[] Add alcoholic drink
[] Create order
[] View order status
[] Request discount
[] Request cancellation
[] Cashier settles cash
[] Receipt opens
```

---

## 9. Kitchen / Bar Verification

Kitchen:

```
[] View kitchen queue
[] Mark preparing
[] Mark ready
```

Bar:

```
[] View bar stock
[] Low-stock alert appears
[] Issue bar stock
```

---

## 10. Finance Verification

```
[] Record income
[] Record expense
[] Cash settlement appears
[] Cashier reconciliation works
[] Variance alert created
[] Daily P&L snapshot works
[] Weekly P&L snapshot works
[] Monthly P&L snapshot works
[] Annual P&L snapshot works
[] Food / soft drinks / alcohol profitability split works
```

---

## 11. Enforcement Verification

```
[] Staff incident can be created
[] Risk scores can be generated
[] Enforcement dashboard loads
[] Audit feed loads
[] Enforcement actions can be created
[] High-risk staff appears correctly
```

---

## 12. Monitoring Verification

```
[] Owner dashboard loads
[] Sales cards show
[] Low stock alerts show
[] Pending approvals show
[] Pending M-Pesa shows
[] Unsold food alerts show
[] Kitchen queue count shows
[] Bar low-stock count shows
[] Cashier settlement count shows
```

---

## 13. Nginx Deployment

```
sudo cp deployment/nginx/meat-lovers-cims.conf /etc/nginx/sites-available/meat-lovers-cims
sudo ln -s /etc/nginx/sites-available/meat-lovers-cims /etc/nginx/sites-enabled/meat-lovers-cims
sudo nginx -t
sudo systemctl restart nginx
```

---

## 14. Backup Setup

```
chmod +x deployment/scripts/backup_mysql.sh

Add cron:

crontab -e

0 23 * * * /var/www/meat-lovers-cims/deployment/scripts/backup_mysql.sh

Test backup:

deployment/scripts/backup_mysql.sh
ls database/backups
```

---

## 15. Final Production Verification

System is production-ready only when all pass:

```
[] Database fully migrated
[] Seeds loaded
[] Backend API green
[] Website green
[] Admin green
[] POS green
```

- [ ] Monitoring green
- [ ] LAN access confirmed
- [ ] Backup confirmed
- [ ] Login roles confirmed
- [ ] Sales flow confirmed
- [ ] Stock flow confirmed
- [ ] Payment flow confirmed
- [ ] HRM flow confirmed
- [ ] Finance flow confirmed
- [ ] Enforcement flow confirmed
- [ ] Owner dashboard confirmed

---

## 16. Developer Restriction

Developers must not ask:

Where should this file go?  
Which file should run first?  
Which database should be used?  
Which app is the POS?  
Which app is admin?  
Which endpoint should be called?  
Which department owns the data?

This manual answers those questions.

---

## 17. Launch Rule

Production launch is prohibited until every checklist item is marked complete and evidence is submitted.

Evidence must include:

- [ ] screenshots
- [ ] terminal logs
- [ ] database migration proof
- [ ] API test proof
- [ ] frontend build proof
- [ ] POS phone test proof
- [ ] backup proof

---

# Batch 28 Outcome

Final Run-to-Green Manual now covers:

- ✔ database setup
- ✔ backend startup
- ✔ frontend build order
- ✔ POS verification
- ✔ monitoring verification
- ✔ enforcement verification
- ✔ backup setup
- ✔ LAN launch
- ✔ production checklist

# Next Smart Move

Build **Batch 29 – Developer Handover Memo**, a short strict memo telling developers that this manual is the single source of truth and that guessing, bypassing controls, or launching before verification is prohibited.
