System name:

Meat Lovers CIMS powered by YohPal

Stack direction:

- **Frontend:** React + Vite, mobile-first web/PWA
- **Website:** AI-enabled customer acquisition engine
- **Backend:** PHP API
- **Database:** SQL migrations/seeds
- **Root:** apps/, backend/, database/, docs/

Batch 1 — Root Foundation Files

1a.

README.md

```
# Meat Lovers CIMS powered by YohPal
```

```
Meat Lovers CIMS is a web-mobile restaurant control and intelligence system powered by YohPal.
```

Core Objectives

1. Increase sales
2. Stop theft across all departments
3. Monitor sales, income, stock, staff, service, bar, food production, deliveries, finance, and customer activity
4. Provide an AI-enabled website for customer acquisition
5. Support mobile-first POS usage by waiters
6. Provide management visibility through admin and monitoring dashboards

Main Apps

- `apps/website` - AI-enabled customer acquisition website
- `apps/admin-web` - management dashboard
- `apps/pos-pwa` - waiter smartphone POS
- `apps/monitoring-web` - live monitoring dashboard

Backend

- `backend/` - PHP API

Database

- `database/migrations`
- `database/seeds`
- `database/dumps`

Brand Rule

```
The system must always be referred to as:
```

```
**Meat Lovers CIMS powered by YohPal**
```

1b.

.env.example

```
APP_NAME="Meat Lovers CIMS powered by YohPal"  
APP_ENV=development  
APP_URL=http://localhost
```

```
DB_HOST=127.0.0.1  
DB_PORT=3306
```

```
DB_DATABASE=meat_lovers_cims
DB_USERNAME=root
DB_PASSWORD=

JWT_SECRET=change_this_secret

VITE_API_BASE_URL=http://localhost/backend/public/api
VITE_APP_NAME="Meat Lovers CIMS powered by YohPal"
```

1c.

package.json

```
{
  "name": "meat-lovers-cims-powered-by-yohpal",
  "private": true,
  "workspaces": [
    "apps/website",
    "apps/admin-web",
    "apps/pos-pwa",
    "apps/monitoring-web"
  ],
  "scripts": {
    "website:dev": "npm --prefix apps/website run dev",
    "admin:dev": "npm --prefix apps/admin-web run dev",
    "pos:dev": "npm --prefix apps/pos-pwa run dev",
    "monitoring:dev": "npm --prefix apps/monitoring-web run dev",
    "website:build": "npm --prefix apps/website run build",
    "admin:build": "npm --prefix apps/admin-web run build",
    "pos:build": "npm --prefix apps/pos-pwa run build",
    "monitoring:build": "npm --prefix apps/monitoring-web run build"
  }
}
```

docs/MASTER_SCOPE.md

Meat Lovers CIMS powered by YohPal – Master Scope

1. Customer Acquisition Website

The website shall act as an AI-enabled disruptive customer acquisition engine.

It shall support:

- food menu discovery
- bar and drinks visibility
- promotions
- online enquiries
- customer lead capture
- AI assistant / chatbot placeholder
- WhatsApp and call-to-order links
- delivery lead capture
- customer feedback
- event and catering enquiry capture
- customer segmentation source

2. Product Segmentation

The system shall separate:

1. Food
2. Soft drinks
3. Alcoholic drinks

Each product must belong to one of these categories.

3. Departments Covered

The system shall cover:

1. Suppliers
2. Storekeeping
3. Food production
4. Service
5. Dispatch
6. Bar
7. Unsold cooked food
8. HRM
9. CRM
10. Deliveries
11. Product segmentation
12. Staff motivation, especially service team
13. Asset inventory
14. Finance P&L
15. Daily, weekly, monthly, and annual income statements

4. Anti-Theft Controls

The system shall control theft by:

- recording every stock movement
- separating store, kitchen, bar, service, and dispatch stock
- requiring approval for cancellations
- requiring approval for discounts
- recording unsold cooked food
- tracking bar stock separately
- recording cash settlements
- tracking staff actions
- producing daily reports

5. Sales Growth Controls

The system shall increase sales through:

- AI-enabled website lead capture
- customer CRM
- promotions
- product performance tracking
- waiter performance tracking
- service motivation dashboard
- delivery tracking
- repeat-customer monitoring

6. Mobile-First Rule

The system must work properly on:

- smartphones
- tablets
- laptops
- desktops

Waiters must be able to use smartphones as POS devices.

## Folder Ownership

### **apps/website**

Customer-facing website and AI-enabled acquisition engine.

### **apps/admin-web**

Management dashboard for operations, stock, finance, HRM, CRM, suppliers, reports, and approvals.

### **apps/pos-pwa**

Mobile-first waiter POS.

### **apps/monitoring-web**

Live monitoring dashboard for owner/management.

### **backend**

PHP API.

### **database**

SQL migrations, seed data, and dumps.

### **docs**

Business rules, developer manuals, SOPs, and implementation guides.

---

```
1g. `docs/DEVELOPER_RULES.md`
```

```
```md
```

```
# Developer Rules
```

This document is binding.

```
## 1. No Guessing
```

Developers must not guess:

- where a file belongs
- which system owns data
- which API endpoint to call
- which department owns a workflow
- which product category to use
- which approval rule applies

If unclear, the developer must stop and request clarification.

```
## 2. Brand Rule
```

Always refer to the system as:

```
**Meat Lovers CIMS powered by YohPal**
```

```
## 3. Mobile-First Rule
```

Every frontend screen must be usable on a smartphone.

```
## 4. API Rule
```

Frontend apps must not talk directly to the database.

All data must pass through the PHP backend API.

```
## 5. Department Rule
```

Every operational action must belong to a department:

- SUPPLIERS
- STORE
- KITCHEN

- SERVICE
- DISPATCH
- BAR
- UNSOLD_FOOD
- HRM
- CRM
- DELIVERIES
- ASSETS
- FINANCE

6. Audit Rule

Every sensitive action must be auditable.

Sensitive actions include:

- stock adjustment
 - order cancellation
 - discount
 - refund
 - cash settlement
 - bar stock movement
 - unsold food declaration
 - supplier invoice entry
 - asset write-off
-

docs/NEXT_BUILD_ORDER.md

Build Order

Phase 1

Root structure and documentation.

Phase 2

Database schema.

Phase 3

PHP backend foundation.

Phase 4

Website customer acquisition app.

Phase 5

Admin dashboard.

Phase 6

POS PWA.

Phase 7

Monitoring dashboard.

Phase 8

Enforcement engine.

Phase 9

Finance and reporting.

Phase 10

M-Pesa, printer, and production deployment.

Current Progress

Batch 1 creates the **foundation and official rules**.

Next Smart Move: build **Batch 2 — Database Schema**, covering users, products, suppliers, stock, orders, payments, customers, staff, assets, unsold food, deliveries, audit logs, and finance tables.
